

DANIEL OKERE

Junior Software Developer · Full-Stack & Systems

Lagos, Nigeria | +234 916 963 8677 | okered764@gmail.com | github.com/okeredaniel

Most junior devs show tutorial projects. I show finished systems built solo, shipped to production, pushed past 'working' into 'well-built.' I move across the stack as the problem demands, and I'm still learning on purpose: currently finishing an ADSE.

TECHNICAL SKILLS

Languages: Python, JavaScript, Flutter, Dart

Frontend: React, Next.js, Tailwind CSS, Flutter

Backend: Node.js, FastAPI, Django

Database: MongoDB, MySQL, Supabase

Tools: Git/GitHub, VS Code, Figma, GitLab

KEY PROJECTS

Vector Multi-Agent AI Orchestration Platform *Python · FastAPI · React · WebSockets*

- Built a full-stack dashboard that orchestrates 10+ LLM providers (Groq, Gemini, Mistral, Cohere, HuggingFace and more) with automatic cost/speed-aware fallback routing, so the system stays online even when individual providers fail or rate-limit.
- Designed a self-extension system where agents detect a missing capability, write and validate the code for a new tool, and load it live no manual coding required to add functionality.
- Shipped live real-time status streaming over WebSockets and deployed the backend to production on Render.

Dispatch Incident Management Desktop App *Tauri · React · Node.js · MongoDB*

- Built a cross-platform desktop app for real-time incident tracking with role-based dashboards (Admin, Management, Customer, Professional), live updates via Ably, and Google OAuth authentication.

Gesture Pic Finder *Python · OpenCV · MediaPipe*

- Built a real-time computer vision app that recognizes hand and facial gestures via webcam and triggers matching reactions, using calibrated landmark tracking for personalized accuracy.

EDUCATION

Advanced Diploma in Software Engineering (ADSE) · 2022 – Present

Aptech Ajah, Lagos, Nigeria
