

DANIEL OKERE

Junior Software Developer • Full-Stack • Systems

Lagos, Lekki-Agunji, Nigeria | +234 916 963 8677 | okered764@gmail.com | github.com/okeredaniel

PROFILE

Passionate software developer currently pursuing an Advanced Diploma in Software Engineering. Experienced in building full-stack web applications and desktop tools, with a strong focus on clean UI design, real-time systems, and practical problem-solving. Highly comfortable working across the stack—from interactive React interfaces to robust Node.js APIs and MongoDB data layers. Proven team collaborator with a track record of delivery in shared environments and a committed, self-directed learner.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java (In-Progress), Rust (In-Progress), Dart

Frontend: React.js, Next.js, Tailwind CSS, Bootstrap, UI/UX Design, Flutter

Backend: Node.js, Django

Database: MongoDB, MySQL, Relational Database Design

Tools & Platforms: Git, GitHub, IntelliJ IDEA, VS Code, Figma

KEY PROJECTS

Gesture Pic Finder | Python, OpenCV, MediaPipe

Real-time computer vision app that detects hand and facial gestures via webcam and triggers matching image/video reactions. Implemented custom gesture classification using 21-point hand and 468-point face landmark tracking, calibration-based threshold detection for personalized accuracy, and dual-hand + face-combo gesture recognition (e.g. hands framing face, finger-to-mouth). Resolved cross-version dependency conflicts between Python and MediaPipe to ship a stable, reproducible environment.

Online Banking System | MongoDB, Express.js, React, Node.js (MERN)

- Developed a full-stack banking web app with account creation, deposits, withdrawals, and inter-account transfers
- Designed and implemented a REST API to handle account and transaction operations
- Built a React-based frontend for account management and transaction actions

Dispatch — Incident Management Desktop App | Tauri, React, Node.js, MongoDB

Cross-platform desktop application for real-time incident tracking and response coordination, built with Tauri v2, React, and a Node.js backend. Implemented role-based dashboards (Admin, Management, Customer, Professional), real-time updates via Ably, and Google OAuth authentication through system-browser polling. Backend deployed on Render with MongoDB for data persistence.

EDUCATION

Advanced Diploma in Software Engineering (ADSE) • 2022 – Present

Aptech Ajah • Lagos, Nigeria

- Core Modules: Advanced Java, JavaFX, Data Structures, Web Development, and Software Design Patterns.
- Specialized Studies: Dart/Flutter, JDBC, Generics, Multithreading, and XML/JSON data processing.

KEY STRENGTHS

Critical Thinking: Ability to decompose complex, abstract problems into logical components, enabling the architectural design of universal applications (like the Digital Workspace project) that satisfy diverse user personas.

Problem Solving & Adaptability: Strongly capable of quickly picking up new technologies, frameworks, and programming paradigms (such as currently mastering Java and Rust) to resolve engineering bottlenecks.

Collaborative Mindset: Excel in team-based environments, with all major projects successfully delivered through cross-functional teamwork.

Self-Directed Learning: Consistently research and apply emerging technologies while building real-world software alongside formal education.
